

Final Report

Reported Date: [REDACTED]

Patient Information

First Name: [REDACTED] Middle Initial: [REDACTED]
Last Name: [REDACTED] Date of Birth: [REDACTED]
Gender: Male Ordering Doctor: Michael J Bauer, MD

Sample Information

Test Ordered: Tick-Borne Disease Screen Panel Sample ID: SP-[REDACTED]
Sample Type: Dried Blood Spot Collection Date: 08/30/2024

Test Results

Test	Result	Reference Range	Comments
Lyme Broad Coverage Ab Assay	Positive	Negative	
TBRF Broad Coverage Ab Assay	Positive	Negative	
Babesia Broad Coverage Ab Assay	Negative	Negative	
Bartonella Broad Coverage Ab Assay	Negative	Negative	

Other information:

The Broad Coverage Tick-Borne Disease Screen Panel is a qualitative test designed to detect the presence of human IgM and IgG antibodies against group-specific antigens of Lyme Borreliae, TBRF Borrelia, Babesia, and Bartonella. This test is intended

for clinical use following suspected exposure to these tick-borne pathogens. Results should be interpreted alongside the patient's clinical symptoms and medical history by a licensed healthcare provider to ensure accurate diagnosis and appropriate management.
